K.R. MANGALAM UNIVERSITY · GURUGRAM, HARYANA

ASSESSMENT 2 | VAC-II

AI-Based Visual Branding, Digital Presence & Engagement Analytics

Typed assignment report · Questions 1–9

Course information	Details
Course title & code	Building Your Personal Digital Brand with AI Tools, VAC-II
Programme & school	BCA · School of Engineering and Technology (SOET)
Faculty	Dr. Aarti
Assessment type	Individual assignment · Maximum marks: 5
Student details	Anuroop Singh Arora 2501660001 bca cybersecurity sec

Contents & submission checklist

This report follows the nine assignment questions and includes links to the companion video and portfolio page.

Section	Deliverable
1–2	Logo, brand banner, visual identity, palette, and typography
3	AI-generated intro preview, hosted link, 60-second narration script, and storyboard
4–5	Portfolio website and LinkedIn profile copy
6	Five-day LinkedIn content calendar
7–8	Four analytics metrics and three data-led engagement strategies
9	Five-day personal branding campaign and evaluation plan
Appendix	AI prompt log and final personalization checklist

Before final submission

- Enter your name, roll number, section, and submission date on the cover page.
- Replace suggested interests and skills with your genuine experience; remove anything you cannot demonstrate.
- The assignment brief requires a 60-second video. The linked AI-generated preview is 15 seconds; the complete script and storyboard are provided, but a full 60-second recording must be produced before claiming that requirement is complete.
- Add your actual LinkedIn URL and any real project evidence to the portfolio page.
- Attach screenshots or other evidence required by your instructor and upload all final files to the LMS.

Video duration disclosure: The free AI video generator used for this draft supports a maximum single clip of 15 seconds. The clip is linked and playable, but it does not meet the brief's 60-second duration by itself.

Question 1 — Personal logo and brand banner

Brand concept: “Learn. Build. Share.” The identity positions a BCA student as a curious learner who turns ideas into practical digital work and shares progress transparently.

AI-generated symbol: a rising path and connected points represent progress, digital connection, and learning.

Design rationale

- The simple ascending-path mark stays recognizable at small sizes and suggests progress rather than claiming expertise.
- The banner repeats the same palette and the “Learn. Build. Share.” tagline so the visual language can carry across a portfolio and LinkedIn cover area.
- The assets were generated with an AI image tool and should be reviewed, resized, and adapted before use on live profiles.

Question 2 — Visual identity system

The identity uses a small, repeatable set of colours and type choices so the logo, banner, portfolio, and LinkedIn content feel consistent.

Element	Specification	Purpose
Primary	Deep navy · #0B1020	Professional base; strong contrast for text and backgrounds.

Element	Specification	Purpose
Secondary	Teal · #20C997	Signals progress, freshness, and digital creativity.
Accent	Warm gold · #FFC857	Used sparingly to highlight milestones and key actions.
Neutral	Off-white · #F6F8FC	Keeps pages readable and gives content visual breathing room.
Headings	Poppins SemiBold (or Aptos Display fallback)	Distinctive, compact headings for titles and section labels.
Body	Inter Regular (or Aptos/Arial fallback)	Highly legible body copy for web, mobile, and document use.

Accessibility rule: use navy or dark ink on light backgrounds for body copy, reserve teal and gold for accents, and do not rely on colour alone to communicate meaning.

Question 3 — AI-generated personal introduction video

The AI-generated portrait-format sample has picture and audio. Click the link below to play the hosted MP4:

Watch the hosted AI-generated introduction preview (15 seconds)

Technical details: MP4 · portrait 768 × 1344 · approximately 15.1 seconds · H.264 video with AAC audio.

Important: The assignment requires a 60-second video. This 15-second preview is a short draft, not a complete substitute. Use the script and storyboard below to record or assemble a full 60-second version before final submission.

Suggested 60-second narration script

Read at a calm pace of roughly 135–140 words per minute, allowing brief pauses. Edit the examples to match your real interests and experience.

“Hello, I’m a BCA student building my personal brand around technology, creativity, and steady learning. I’m interested in how simple digital tools can turn ideas into useful experiences. I’m developing my foundations in web development, experimenting with AI for brainstorming and visual content, and learning how to present work clearly online. This portfolio is my learning space. Here I share small projects, design choices, lessons from mistakes, and practical resources that help me improve. I value curiosity, consistency, and collaboration, and I try to give credit to the tools and sources that support my process. Over the next few weeks, I’ll document what I’m learning, invite feedback, and use analytics to understand which topics are genuinely useful. If you’re also learning, building, or exploring AI responsibly, let’s connect. I’m here to learn, build, and share—one project at a time.”

60-second storyboard

Time	Visual / action	Narration focus
0–10 s	Logo reveal; student at desk or direct-to-camera opening.	Name, BCA student identity, central theme.

Time	Visual / action	Narration focus
10–25 s	Short shots of learning, planning, and a code or design screen.	Interests and learning areas; only state what is true.
25–43 s	Portfolio/project details, notes, and one completed small task.	What the portfolio contains; approach to feedback and credit.
43–60 s	Return to speaker; closing tagline and LinkedIn/portfolio prompt.	Share learning goals, invite connection, end with “Learn. Build. Share.”

Question 4 — Simple portfolio website

A responsive, one-page portfolio concept has been prepared as an editable HTML file. It includes an introduction, about section, academic concept projects, skills-in-development, video preview, and a connection section.

Open the hosted portfolio page

An editable HTML source file is included with the companion deliverables. The public page deliberately identifies its sample project examples as VAC-II academic concepts rather than claiming client work. Before submission, update the copy with your own verified interests, skills, real projects, and LinkedIn URL. The hosted page is a simple share link, not a custom domain.

Portfolio structure

- Hero: “Curious mind. Practical builder.” with a short BCA-focused positioning statement.
- About: learning-in-public approach and a transparent description of current development areas.
- Featured work: personal brand kit, five-day visibility plan, and the AI video preview.
- Skills: editable list of areas in development; retain only skills that you can evidence.
- Contact: LinkedIn call to action; add the student’s actual public profile link before publishing.

Question 5 — LinkedIn profile optimization

Suggested headline

Headline: BCA Student | Exploring Web Development & AI Tools | Learning in Public | Building Practical Digital Projects

Suggested About section

I’m a BCA student interested in how technology and clear communication can turn ideas into useful digital experiences. I’m building my foundations in web development and exploring AI tools for research, ideation, and visual content. I use small projects to practise, document what I learn, and improve through feedback.

I care about curiosity, consistency, responsible use of AI, and giving credit to the tools and sources that support my work. I’m currently sharing a personal-branding and portfolio project

as part of my learning journey. If you're also learning, building, or exchanging practical ideas, I'd be glad to connect.

Featured skills and profile improvements

Profile area	Recommendation
Featured skills	Select three strongest truthful skills, for example HTML/CSS fundamentals, Python fundamentals, and AI-assisted content planning—only if you can support them with evidence.
Profile photo & banner	Use a clear, recent professional photo if comfortable; keep the banner consistent with the navy–teal–gold visual identity.
Featured section	Link the portfolio and one genuine project or learning post; avoid presenting concept work as professional client work.
Experience / education	List accurate programme, institution, dates, and any real projects or responsibilities; do not inflate experience.
Custom URL & contact	Use a readable public profile URL and make contact settings appropriate to your privacy preferences.

Question 6 — Five-day AI-assisted LinkedIn content calendar

The calendar is designed as a short "learn in public" sequence. AI can help brainstorm hooks and edit drafts, but every post should be fact-checked, rewritten in the student's voice, and supported by genuine examples.

Day / theme	Post idea and format	Engagement prompt / measure
Day 1 · Introduce	Short text + branded visual: who I am as a BCA student, what I'm learning, and why I'm sharing the process.	Ask what others are currently learning. Track impressions, profile views, and relevant comments.
Day 2 · Learning note	Carousel or short text: one web/AI concept learned this week, explained in three simple points.	Invite a correction or resource. Track saves/clicks and substantive comments.
Day 3 · Build in public	Project screenshot or short demo: show one small feature, design decision, or iteration.	Ask for one specific piece of feedback. Track engagement rate and clicks.
Day 4 · Tool reflection	Text post: how an AI tool supported brainstorming or visual exploration, what needed human review, and what changed.	Ask how peers verify AI-assisted work. Track comments and reposts.
Day 5 · Weekly recap	A concise reflection: three takeaways, one challenge, and next week's learning goal.	Invite connections and future topic suggestions. Track profile views, follows, and replies.

Suggested cadence: publish when the audience is likely to be active, remain present to reply, and review each post after a consistent measurement window (for example, seven days). The best posting time should be learned from the account's own results.

Question 7 — Four metrics and why they matter

The following LinkedIn metrics help separate distribution, attention, and action. Exact labels and availability can vary by profile type and platform interface.

Metric	What it indicates	Why it matters / use
Impressions	How many times content was displayed.	Shows distribution. Compare similar posts over the same time window; it is not the same as unique people reached.
Members reached / unique viewers	Approximate number of distinct accounts exposed, where shown.	Helps distinguish broad reach from repeat displays and judge whether content is reaching new people.
Engagement rate	Engagements relative to impressions, as defined by the platform dashboard.	Shows whether exposed viewers took actions. Compare like-for-like formats and inspect the dashboard's formula.
Profile views	Visits to the profile during a selected period.	Signals interest beyond a single post; spikes can reveal which topics or posts prompted further exploration.

Interpretation note: A metric is useful only when paired with a goal and a time window. A high impression count with few meaningful responses may call for a clearer hook or stronger audience fit, not simply more posting.

Question 8 — Three analytics-based engagement strategies

1. Improve reach when impressions are consistently low

Review which topics and formats earned relatively more impressions, then focus on the audience's strongest interests. Test clearer opening lines, readable visuals, and a consistent posting cadence; use only relevant hashtags and invite a specific response. Compare each test against a similar previous post rather than changing every variable at once.

2. Improve interaction when reach is high but engagement is weak

Make the post more useful and easier to respond to: share a concrete example, concise steps, a lesson learned, or a genuine question. Use a simple visual when it improves comprehension. Track comments, reposts, clicks, and the account's displayed engagement rate; prioritize meaningful discussion over empty reactions.

3. Turn profile visits into sustained connections

If posts drive profile views but few follows or conversations, align the headline and About section with the post topic, add a relevant project to Featured, and make the next action clear. Respond thoughtfully to comments and connect with people whose interests genuinely overlap. Review profile views and new follows after each campaign window.

Decision rule: Record a baseline, change one element at a time, compare equivalent periods, and

retain only changes that improve the chosen outcome without reducing content quality.

Question 9 — “Five-Day Visibility Challenge” campaign

Campaign promise: share one authentic learning update each day for five days, show small evidence of progress, and use feedback to choose the next topic. This campaign is designed for a student learning in public, not for claiming expertise.

Day	Campaign post	Success signal
1	Introduce the learning goal and invite peers to follow the five-day journey.	Relevant comments and profile visits.
2	Explain one useful concept or learning takeaway.	Saves/clicks and substantive discussion.
3	Show a small build or iteration with a short explanation.	Project clicks, feedback, and engagement rate.
4	Share an honest lesson about using an AI tool responsibly.	Thoughtful comments, reposts, and discussion quality.
5	Summarize results, thank contributors, and state the next learning goal.	Profile views, new relevant connections, and replies.

How I would evaluate success

- Before posting, record a seven-day baseline for impressions, unique reach if available, engagement rate, profile views, and follows.
- Set realistic targets relative to the account’s own baseline—for example, aim for a modest improvement in reach or meaningful comments, rather than promising a universal benchmark.
- Use one consistent measurement window for every post and note the format, topic, opening hook, and call to action.
- At the end of Day 5, compare campaign results with baseline, identify the strongest post and audience response, and capture one lesson for the next cycle.
- Success means learning which content creates relevant interaction and improving the next campaign; a large impression count alone is not sufficient.

Appendix — AI prompt log and final checks

Prompts used / proposed for reproducibility

Asset	Prompt summary
Logo mark	Generate a minimal, text-free symbol combining an ascending path and connected points; use navy, teal, and gold; make it clear at small sizes.
Banner	Create a horizontal personal brand banner with the exact headline “LEARN. BUILD. SHARE.” and subtitle “BCA • DIGITAL BRANDING,” using a consistent navy–teal–gold system.

Asset	Prompt summary
Video	Create a short vertical BCA personal-brand introduction with a digital mark, learning/building visuals, non-identifiable student silhouette, friendly English narration, and subtle uplifting music.
Content planning	Draft a five-day LinkedIn sequence for a BCA student sharing genuine learning, small projects, responsible AI use, feedback, and an analytics-based weekly reflection.

Personalization checklist

- Verify every biographical statement, skill, interest, and project before submission.
- Add your real name and course details; confirm that the portfolio's public copy is appropriate to share.
- Produce and link a complete 60-second version if the course instructor strictly enforces the stated duration.
- Review the AI-generated visuals and video; disclose AI assistance where required by the instructor.
- Keep evidence of your own edits and be ready to explain the design choices, metrics, and campaign evaluation in the viva voce.

End of assignment report.
